Bankrupting nature pdf download torrent windows 10

“... unlike previous pessimistic assessments of tipping points for humanity and Earth, this book by Johan Rockström, head of the Stockholm Resilience Centre, and Anders Wijkman, a former member of the European Parliament, combines a critique of political and economic systems with an assessment of global ecology. It is an extension of the influential planetary-boundaries idea that Rockström and colleagues first published in Nature in 2009.” – Peter Kareiva, chief scientist at The Nature Conservancy in Arlington, Virginia, Nature, October 2012 “The world is headed for a major transition and unless we recognize and deal with that, it could very well be a major disaster for humanity. Wijkman and Rockström have provided the clear evidence and practical policy ideas to allow us to seize this moment as an opportunity to make the transition to a much better, more sustainable and desirable world. We cannot afford to miss this opportunity.” – Robert Costanza, Visiting Fellow, Crawford School of Public Policy, Australian National University, Editor-in-Chief of Solutions and Senior Fellow, Stockholm Resilience Center, Stockholm, Sweden “... this contribution by Wijkman and Rockström is so important. It does not leave us with the problem alone. It takes us to the blueprint for a true-green economy. It is about the way that we can reinvent growth for all, which is affordable, equitable and sustainable.” – Sunita Narain, Director-General, Centre for Science and Environment, New Delhi “Wijkman and Rockström convincingly show the strength and necessity of an integrated systems perspective of world development, that combines an understanding of how climate change interacts with ecosystem changes across the world, and how social and ecological factors interplay and ultimately determine our ability to provide welfare and wellbeing for a rapidly growing world population. Their book is a timely wake-up call for all politicians, businessmen and citizens of Earth.” – Pavan Sukhdev, Founder-CEO of GIST (Green Indian States Trust) Advisory and Study Leader of TEEB

“The public discussion on climate change and the environment has lost its momentum. The focus is on other issues, like finance and the economy. Wijkman and Rockström show convincingly why this must change. Wealth generation based on carbon can not continue much longer. We are borrowing resources belonging to future generations, and in the process imperiling their right to livelihood. Today’s great denial will be revealed. The combination of solid science, vast experience from politics and public affairs and profound compassion makes this book extraordinarily useful.” – Anders Weijrd, Archbishop of Sweden “Growth has pushed the physical scale of the economy beyond planetary boundaries and has thereby become uneconomic growth – growth that now increases environmental and social costs faster than production benefits, making us poorer, not richer. This book will help citizens, and maybe even politicians and economists, understand what is happening.” – Herman E. Daly, Professor Emeritus, School of Public Policy, University of Maryland, USA “Bankrupting Nature summarizes succinctly our human challenges, correctly focusing on re-designing today’s global financial casino. Ignored in most textbooks, finance is now a flywheel of social and environmental destruction while economists are still suffering ‘theory-induced blindness’. The authors demonstrate conclusively that it is high time for humanity to grasp scientific realities and re-integrate our knowledge systematically – Important, constructive advice for politicians, scientists, NGOs and all who work toward cleaner, greener, equitable, sustainable human futures.” – Hazel Henderson, author, President Ethical Markets Media (USA & Brazil) producers of the Green Transition Scoreboard®. Transforming Finance Based on Ethics and Life’s Principles, co-creators of the Calvert-Henderson Quality of Life Indicators “Since 2007, more books are taking an economic approach in arguing for investment in renewables and phase-out of fossil fuels – and Bankrupting Nature: Denying Our Planetary Boundaries could be among the more engaging, even offering hope that dependence on fossil fuels can be overcome ... Bankrupting Nature offers a crash-course on sustainability challenges – a sincere and polite contribution to the conversation needed between those who aim for action to slow climate change and those who want to continue with business as usual.” – Susan Froetschel, Yale Global Online “The book is written in an engaging and accessible style. There are diagrams a d graphs to illustrate trends but happily the volume is largely uninterrupted by excessive referencing. Historical facts, political negotiations and the often complex nature of environmental problems and the state of scientific knowledge are explained with significant clarity. Each chapter is short – averaging 10 pages which adds to the readability and will be a blessing for the busy academic, scholar and practitioner. The result is a highly readable and intelligible volume that leaves no excuses for future inaction ... a particular strength of this volume lies in the clarity of writing making it accessible to a broad audience extending well beyond scholars and academics. It will be essential reading for environmental lawyers wishing to remain informed of multi-disciplinary developments in the area. The book is recommended for anyone who is concerned about the state of the global environment and natural resources and has interests in the future sustainability of planet earth.” – Erika J. Techera, Asia Pacific Journal of Environmental Law “This book shows that an economy built on the continuous expansion of material consumption is not sustainable. Based on the increased evidence of the uncanny correlation between the escalating rates of global economic growth and environmental degradation, this book continues to raise worldwide awareness of environmental problems created as the result of anthropogenic activities. Bankrupting Nature demonstrates that we are still in deep denial about the magnitude of the global environmental challenges and resource constraints facing the world... The book is extremely helpful in raising awareness of the issues as well as possible solutions.” – Helen Kopnina, Trumpeter “Clearly written and structured, with useful references and figures, this book is persuasive in calling for an interdisciplinary approach to address the issues facing science and society at large.” – Cally Harmer, Sherkin Comment

“The writing style is concise and engaging and is supported by compelling graphs which support their arguments. One of the great strengths of the authors is their fluency in environmental economics. Wijkman and Rockstrom directly confront the arguments of neoliberal economists who assert that the world cannot afford the radical measures required to prevent climate change.” – Chris Peters, EINGANA “This is one of the best-informed, overviews of our planetary situation and should be compulsory reading for all political representatives.” – David Lorimer, Network Review IMPORTANT! 2.80 is the first firmware to utilize the new Helix Core engine, which unifies all Helix and HX products into the same ecosystem. Because there are tons of changes under the hood, presets created in 2.80 will not be compatible with earlier firmware, which means if you want to return to 2.71 for whatever reason, and you didn’t back up before updating to 2.80, your presets will NO LONGER WORK! Therefore, we **STRONGLY RECOMMEND** everyone back up everything BEFORE updating. Transitioning to Helix Core also forces us to reset your Global Settings. No way around that. Just back everything up, okay? Instructions for backing up begin... now. Updating to 2.80 (READ ME!) Connect your Helix / HX processor to a Mac or PC via USB and turn it on. Do not use any sort of USB hub. Open YOUR CURRENT VERSION of HX Edit (NOT the new HX Edit 2.80). From the top File menu, select “Create Backup...”. Click “Create Backup.” TIP: If you want to load the 2.80 factory presets and hotkey templates, it’s better to manually back up individual setslists, so you can later import them into empty setslists. To do this, from the preset library along the left side, select the settlist you want to back up and click “Export.” Choose a destination folder and click “Save.” Repeat for any other setslists you want to back up. 1b. Backing Up Helix Native. If you don’t own Helix Native, skip to step 2. Open any instance of YOUR CURRENT VERSION Helix Native (NOT the new Helix Native 1.80) within your DAW and click the gear icon in the lower left corner to open the Preferences window. From the Presets/IRs tab, click “Export Bundle.” Choose the destination folder and click “Save.” TIP: If you want to load the 2.80 factory presets, it’s better to manually back up individual setslists, so you can later import them into empty setslists. To do this, from the preset library along the left side, select the settlist you want to back up and click the small yellow “Export.” Choose a destination folder and click “Save.” Repeat for any other setslists you want to back up. 2. Updating HX Edit to 2.80 YOU MUST DO THIS BEFORE UPDATING YOUR HELIX / HX FIRMWARE! Turn off or disconnect any connected Helix or HX hardware. Log onto line6.com and visit the downloads page. From the middle pull-down menu, select “HX Edit.” From the right pull-down menu, select your computer’s operating system. Click the Go button. Find HX Edit Version 2.80 and click “Get Download.” Read the Software License Agreement (hahahaha!) and click “Accept and Download.” Once the software has downloaded, double-click the installer and follow the prompts. NOTE: Installing HX Edit 2.80 automatically installs the latest version of Line 6 Updater, which is required to update the firmware. 3a. Updating Helix Floor / Rack / LT to 2.80 If you have HX Effects or HX Stomp, skip to step 3b instead. If you have Helix Rack / Control, turn off Helix Rack/Control. Also, shut down all Line 6 software or any programs that use audio, like DAWs, iTunes, Spotify, video games, etc. Connect Helix to a Mac or PC via USB (do not use any sort of USB hub) and turn it on. Launch Line 6 Updater. The latest version was automatically installed when you installed HX Edit 2.80 in “STEP 2 Updating HX Edit to 2.80” above. Enter your Line 6 Username and Password and click “Sign In.” A big green box appears with a picture of your Helix product. Click the big green box and then click “Update” next to Version: 2.80. Carefully read the instructions (HEY! DID YOU BACK UP FIRST?), click “Continue,” and then “Accept.” A warning dialog appears, telling you that Helix will be reset twice. Think “Hmm, maybe I should’ve backed up first!” Nah, I insist on subverting the dominant paradigm.” and click “OK.” Helix begins updating. As wholly expected, because we warned you... because you always read the instructions... halfway through the update process, Line 6 Updater displays a second dialog and Helix’s LCD reads “Boot Failure. Entered Update Mode!” THIS IS NORMAL. Breathe deep, everything is fine. You’re almost there. Click “OK” again. When finished, Helix restarts automatically and begins rebuilding your presets. Let it finish. If you have Helix Rack/Control, turn on Helix/Control. Helix Rack reads “Helix Control must be updated to work properly. Update now?” Press Knob 6 (OK) to update Helix/Control. NOTE: Updating the firmware does not automatically load any new presets. See step 4, “Loading the 2.80 Factory Presets / Templates” below. 3b. Updating HX Effects / HX Stomp to 2.80 If you have Helix Floor, Helix Rack / Control, or Helix LT, follow step 3a. Helix or HX hardware. Log onto line6.com and visit the downloads page. From the middle pull-down menu, select “HX Edit.” From the right pull-down menu, select your computer’s operating system. Click the Go button. Find HX Edit Version 2.80 and click “Get Download.” Read the Software License Agreement (hahahaha!) and click “Accept and Download.” Once the software has downloaded, double-click the installer and follow the prompts. NOTE: Installing HX Edit 2.80 automatically installs the latest version of Line 6 Updater, which is required to update the firmware. 3a. Updating Helix Floor / Rack / LT to 2.80 If you have HX Effects or HX Stomp, skip to step 3b instead. If you have Helix Rack / Control, turn off Helix Rack/Control. Also, shut down all Line 6 software or any programs that use audio, like DAWs, iTunes, Spotify, video games, etc. Connect Helix to a Mac or PC via USB (do not use any sort of USB hub) and turn it on. Launch Line 6 Updater. The latest version was automatically installed when you installed HX Edit 2.80 in “STEP 2 Updating HX Edit to 2.80” above. Enter your Line 6 Username and Password and click “Sign In.” A big green box appears with a picture of your HX product. Click the big green box and then click “Update” next to Version: 2.80. Carefully read the instructions (HEY! DID YOU BACK UP FIRST?), click “Continue,” and then “Accept.” When finished, your HX device restarts automatically. NOTE: Updating the firmware does not automatically load any new presets. See step 4, “Loading the 2.80 Factory Presets / Templates” below. 4. Loading the 2.80 Factory Presets / Templates IMPORTANT! The following procedure will COMPLETELY ERASE ALL OF YOUR CUSTOM PRESETS! If you want to keep them, make sure you back them up first! See “(STEP 1a: Backing Up Helix / HX Hardware” above). Turn off your Helix / HX processor. Depending on your type of Helix / HX product, follow the procedure below: Helix Floor / LT - While holding footswitches 7 and 8 (two left-most switches on the bottom row), turn on Helix / Helix LT. Wait for “Will restore stock Presets and Setslists...” and let go Helix Rack / Control - While holding knobs 3 and 4 below the screen, turn on Helix Rack. Wait for “Will reset Presets...” and let go HX Effects - While holding footswitches 5 and 6 (middle two switches on the bottom row), turn on HX Effects. Wait for “Will reset Presets...” and let go HX Stomp - While holding footswitches 1 and 2, turn on HX Stomp. Wait for “Will reset Presets...” to appear on the screen and let go Helix Native - Click the gear icon in the lower left corner to open the Preferences window. From the Presets/IRs tab, click “Restore Factory Setslists” 5a. Restoring Helix / HX Hardware from a Backup (Optional) Connect your Helix / HX processor to a Mac or PC via USB (do not use any sort of USB hub) and turn it on. Open the NEW VERSION OF HX Edit 2.80 you installed in step 2, “Updating HX Edit to 2.80” above. From the top File menu, select “Restore from Backup.” Browse to the backup file and click “Open.” TIP: If you instead exported individual setslists and loaded the 2.80 factory presets / templates (and want to keep them), from the preset list along the left side, select the empty “Hotkey.” Click the small keypad icon and simply enter the keystroke from your computer keyboard. Don’t forget to customize the switch label! NOTE: Just like a normal computer keyboard, hotkeys work unless the software or app you want to control is slower than normal. Restart Helix / HX, and you’ll see the display read “Rebuilding preset [XXXX].” Wait for it to rebuild your presets, and they will load faster. 5b. Restoring Helix Native from a Backup If you don’t own Helix Native, skip this step. Open any instance of Helix Native within your DAW and click the gear icon in the lower left corner to open the Preferences window. From the Presets/IRs tab, click “Import Bundle.” Browse to the location chosen in STEP 2 above and click “Open.” Whew! That wasn’t too terrible, now was it? What’s that... it was? Sorry. Now that Helix Core is finished, hopefully future update procedures will be less... involved. New Amp Models in 2.80 Helix Floor, Helix Rack, Helix LT, Helix Native, HX Stomp Fullerton Nrm, based on* the classic 1958 Fender® 5C3 Tweed Deluxe (normal channel) Fullerton Brt, based on* the classic 1958 Fender® 5C3 Tweed Deluxe (bright channel) Fullerton Jmp, based on* the classic 1958 Fender® 5C3 Tweed Deluxe (jumped channels) Grammatico Nrm, based on* the modern 2016 Grammatico LaGrange (normal channel) Grammatico Brt, based on* the modern 2016 Grammatico LaGrange (bright channel) Grammatico Jmp, based on* the modern 2016 Grammatico LaGrange (jumped channels) Revv Gen Red, based on* the red (gain 2) channel of the Revv® Generator 120 Ampeg SVT-4 PRO, based on* the Ampeg® SVT-4 PRO NOTE: All product names used in this document are trademarks of their respective owners and neither Yamaha Guitar Group nor Line 6 are associated or affiliated with them. These trademarks appear solely to identify products whose tones and sounds were studied by Line 6 during sound model development. That said, the teams at Revv and Grammatico are super cool (and patient!) and you should buy their awesome amps. New Effects Models in 2.80 Helix Floor, Helix Rack, Helix LT, Helix Native, HX Effects, HX Stomp Distortion > Dhyanra Drive (Mono, Stereo), based on* the Hermida Zendrive Distortion > Hair Apparent (Mono, Stereo), based on* the Analogman Prince of Tone (basically half a King of Tone) Distortion > Tone Sovereign (Mono, Stereo), based on* the Analogman King of Tone V4. Connected two Priests of Tone(s) Distortion > ZeroAmp(s) DI (Mono, Stereo), based on* the Tech 21® SansAmp Bass Driver DI VI Distortion > Ampeg Scrambler (Mono, Stereo), based on* the Ampeg® Scrambler Bass Overdrive Filter > Asheville Pattrn (Mono, Stereo), based on* the Moog® Moogerfooger® MF-105F MIDI MuRF Filter (with both MuRF and Bass MuRF voicings) EQ > Low/High Shelf (Mono, Stereo), Line 6 Original EQ > Tilt (Mono, Stereo), Line 6 Original. Tilt is a subtle 6dB EQ that boosts high frequencies while simultaneously attenuating low frequencies (or vice versa). Great for quickly making tones a bit brighter or darker. The Center Freq parameter sets the frequency around which the boost and cut pivot NOTE: All product names used in this document are trademarks of their respective owners and neither Yamaha Guitar Group nor Line 6 are associated or affiliated with them. These trademarks appear solely to identify products whose tones and sounds were studied by Line 6 during sound model development. New Features in 2.80 NOTE: For additional information on Helix Native 1.80 or HX Edit 2.80, check out the latest Helix Native and HX Edit Pilot’s Guides, which are automatically installed with the new 1.80 / 2.80 software. Hotkeys Helix Floor, Helix Rack / Control, Helix LT, HX Effects IMPORTANT! The first time you update Helix/HX to 2.80, your Mac or PC may ask what kind of keyboard you have connected. Just ignore this and close the window. The Command Center can now send QWERTY hotkeys (keyboard shortcuts with or without modifiers such as Shift, Control, Option/Alt, and Command) to your Mac, PC, or iOS device via USB. You can now control virtually any software ever made, including DAWs, looping software, DJ software, media players, lighting software, video software, browsers, or video games... with your feet... or when assigned to an Instant command, from any preset or snapshot recall. From the Command Center menu, select a footswitch or instant command and turn Knob 1 (Command) to select Hotkey. Turn knobs 2-5 to select the desired keystroke. If the keystroke doesn’t have modifiers, leave knobs 2, 3, and 4 set to None. TIP: It’s much faster and easier to program keystrokes from HX Edit 2.80. Open the Command Center window, select a footswitch or instant command, and from the Command pop-up menu, select “Hotkey.” Click the small keypad icon and simply enter the keystroke from your computer keyboard. Don’t forget to customize the switch label! NOTE: Just like a normal computer keyboard, hotkeys work unless the software or app you want to control is slower than normal. Restart Helix / HX, and you’ll see the display read “Rebuilding preset [XXXX].” Wait for it to rebuild your presets, and they will load faster. 5b. Restoring Helix Native from a Backup If you don’t own Helix Native, skip this step. From the Command Center menu, select a footswitch or instant command and turn Knob 1 (Command) to select Hotkey. Turn knobs 2-5 to select the desired keystroke. If the keystroke doesn’t have modifiers, leave knobs 2, 3, and 4 set to None. TIP: It’s much faster and easier to program keystrokes from HX Edit 2.80. Open the Command Center window, select a footswitch or instant command, and from the Command pop-up menu, select “Hotkey.” Click the small keypad icon and simply enter the keystroke from your computer keyboard. Don’t forget to customize the switch label! NOTE: Just like a normal computer keyboard, hotkeys work unless the software or app you want to control is slower than normal. Restart Helix / HX, and you’ll see the display read “Rebuilding preset [XXXX].” Wait for it to rebuild your presets, and they will load faster. 5b. Restoring Helix Native from a Backup If you don’t own Helix Native, skip this step. Open any instance of Helix Native within your DAW and click the gear icon in the lower left corner to open the Preferences window. From the Presets/IRs tab, click “Import Bundle.” Browse to the location chosen in STEP 2 above and click “Open.” Whew! That wasn’t too terrible, now was it? What’s that... it was? Sorry. Now that Helix Core is finished, hopefully future update procedures will be less... involved. New Amp Models in 2.80 Helix Floor, Helix Rack, Helix LT, Helix Native, HX Stomp Fullerton Nrm, based on* the classic 1958 Fender® 5C3 Tweed Deluxe (normal channel) Fullerton Brt, based on* the classic 1958 Fender® 5C3 Tweed Deluxe (bright channel) Fullerton Jmp, based on* the classic 1958 Fender® 5C3 Tweed Deluxe (jumped channels) Grammatico Nrm, based on* the modern 2016 Grammatico LaGrange (normal channel) Grammatico Brt, based on* the modern 2016 Grammatico LaGrange (bright channel) Grammatico Jmp, based on* the modern 2016 Grammatico LaGrange (jumped channels) Revv Gen Red, based on* the red (gain 2) channel of the Revv® Generator 120 Ampeg SVT-4 PRO, based on* the Ampeg® SVT-4 PRO NOTE: All product names used in this document are trademarks of their respective owners and neither Yamaha Guitar Group nor Line 6 are associated or affiliated with them. These trademarks appear solely to identify products whose tones and sounds were studied by Line 6 during sound model development. That said, the teams at Revv and Grammatico are super cool (and patient!) and you should buy their awesome amps. New Effects Models in 2.80 Helix Floor, Helix Rack, Helix LT, Helix Native, HX Effects, HX Stomp Distortion > Dhyanra Drive (Mono, Stereo), based on* the Hermida Zendrive Distortion > Hair Apparent (Mono, Stereo), based on* the Analogman Prince of Tone (basically half a King of Tone) Distortion > Tone Sovereign (Mono, Stereo), based on* the Analogman King of Tone V4. Connected two Priests of Tone(s) Distortion > ZeroAmp(s) DI (Mono, Stereo), based on* the Tech 21® SansAmp Bass Driver DI VI Distortion > Ampeg Scrambler (Mono, Stereo), based on* the Ampeg® Scrambler Bass Overdrive Filter > Asheville Pattrn (Mono, Stereo), based on* the Moog® Moogerfooger® MF-105F MIDI MuRF Filter (with both MuRF and Bass MuRF voicings) EQ > Low/High Shelf (Mono, Stereo), Line 6 Original EQ > Tilt (Mono, Stereo), Line 6 Original. Tilt is a subtle 6dB EQ that boosts high frequencies while simultaneously attenuating low frequencies (or vice versa). Great for quickly making tones a bit brighter or darker. The Center Freq parameter sets the frequency around which the boost and cut pivot NOTE: All product names used in this document are trademarks of their respective owners and neither Yamaha Guitar Group nor Line 6 are associated or affiliated with them. These trademarks appear solely to identify products whose tones and sounds were studied by Line 6 during sound model development. New Features in 2.80 NOTE: For additional information on Helix Native 1.80 or HX Edit 2.80, check out the latest Helix Native and HX Edit Pilot’s Guides, which are automatically installed with the new 1.80 / 2.80 software. Hotkeys Helix Floor, Helix Rack / Control, Helix LT, HX Effects IMPORTANT! The first time you update Helix/HX to 2.80, your Mac or PC may ask what kind of keyboard you have connected. Just ignore this and close the window. The Command Center can now send QWERTY hotkeys (keyboard shortcuts with or without modifiers such as Shift, Control, Option/Alt, and Command) to your Mac, PC, or iOS device via USB. You can now control virtually any software ever made, including DAWs, looping software, DJ software, media players, lighting software, video software, browsers, or video games... with your feet... or when assigned to an Instant command, from any preset or snapshot recall. From the Command Center menu, select a footswitch or instant command and turn Knob 1 (Command) to select Hotkey. Turn knobs 2-5 to select the desired keystroke. If the keystroke doesn’t have modifiers, leave knobs 2, 3, and 4 set to None. TIP: It’s much faster and easier to program keystrokes from HX Edit 2.80. Open the Command Center window, select a footswitch or instant command, and from the Command pop-up menu, select “Hotkey.” Click the small keypad icon and simply enter the keystroke from your computer keyboard. Don’t forget to customize the switch label! NOTE: Just like a normal computer keyboard, hotkeys work unless the software or app you want to control is slower than normal.
